I am pleased to announce the launch of European Journal of Cell Science (EJCS), a new peer reviewed open access journal published by European Academy of Applied and Social Sciences (EURAASS). EJCS aims to become a leading international peer-reviewed academic journal, publishing high quality research and analysis on all aspects of cell biology. The aim of the EJCS is to publish the research work in any field of experimental biology including the major areas of cell sciences such as aging and stress responses, autophagy, apoptosis, necrosis, biochemistry, bioinformatics, biology of organelles, cancer, cell biology, cell division, cell metabolism, cell physiology, cellular kinetics, chromatin biology and genome organization, differentiation, disease mechanisms, DNA replication, transcription, translation, RNA processing and decay, recombination, and repair, enzyme mechanism, natural product biosynthesis, epidemiology, evolution, fertilization, genetics, genomics, glycobiology, immunology, hematology, virology, lipid metabolism, microbial pathogenesis, microbiology, molecular biology, morphogenesis, neuroscience, proteomics, regeneration, cell signaling, systems biology and therapeutics.

Interdisciplinary research and communication between diverse expert communities drives the creation of the future technologies. EJCS aims to encompass all aspects of cellular and molecular biology in order to inform the inner workings of individual cells, as well as how cells react and respond to each other and their environment. EJCS is created and launched according to this objective, proposing and promoting an easy way to share innovation, works, and create connections to go further!

EJCS will be competing head-on with a number of existing subscription-based journals. However, there is clearly a niche for the new journal. The reason for this is because all journal articles

will be accessible without any access boundaries to all internet users throughout the world. Another major benefit of open access online journals is that anyone can contribute, and not only those in major institutions. These freedoms are coupled with rigorous, fair and prompt standards of peer review.

Such a challenge involves a strong and cohesive editorial team. As Editor-in-Chief, I would like to take this opportunity to thank the members of our Editorial team, who trusted this adventure. Editorial team will be particularly concerned by maintaining high international scientific standards of any single post published in European Journal of Cell Science, through a careful examination, peer-reviewing process, and article selection. Second objective is selecting and bringing out innovative studies making the Journal as a source of inspiration for researchers. I would like to thank Dr. Sajjad H. Sajjad, founder the European Academy of Applied and Social Sciences (EURAASS) for his trust and his perseverance, without whom this scientific adventure would not have been possible. We would like to thank our authors, their trust and hard work in disclosing their latest research, our referees in their impartial effort for keeping the highest international scientific standards, and you, our readers, for your interest and support. We are proud to propose the inaugural issue of European Journal of Cell Science, and we specially thank the contributors for their first efforts.

Dr. Mahmoud Alhosin
Editor-in-Chief
